

TB—0389

**USERID AND PASSWORD
REQUIREMENT CHANGES
FOR USERS OF ADABAS, NATURAL,
AND CICS BATCH SUBMITTED UTILITY JOBS**

Issue Date: December 14, 2006
Effective Date: December 14, 2006
Section/Group: Database Administration
Phone Number: 801-538-3235
Submitted by: Mark Gunderson
Approved by: Darcie Trimble

Due to the implementation of RACF propagation control, batch submitted jobs are required to include a USER= parameter within the JCL jobcard. Batch jobs submitted online through internal readers of ADABAS, Natural, and CICS show the started task name as the owner of the submitted job. Therefore, a PASSWORD= parameter is also required for authentication. DTS Database Administration is in the process of changing the Batch Utility Programs provided for users to submit from within the Natural/CICS environments. This requires the Natural programs to be changed, prompting for a USERID and PASSWORD before the job is submitted to the internal reader. The following utility programs maintained by the DBA Group are to be converted to this new requirement. Some obscure programs may be overlooked. They will be modified as soon as possible upon identification.

Natural Batch Submission Programs Affected:

- NATBATCH (Batch Submission Utility)
- NATSCAN (Program Library Scan Utility)
- DBNSSMV1 (Program Move Utility)
- NTSECRV (Natural Security Retrieval Report Utility)

Any user written programs used to submit batch jobs online through the internal reader will need to be modified by the development group responsible for maintaining those programs to include USER= and PASSWORD= parameters.
